

Practice Improvement

Improved client care through ongoing reflection, assessment, and refinement of occupational therapy services across practice settings.

Evidence-Based Practice

An approach to practice that integrates a systematic search, appraisal and synthesis of relevant research, clinical expertise, and patient preferences and values.

Knowledge Translation

Strategies that improve the accessibility and applicability of research results to everyday clinical practice.

Quality

The ability to achieve desired outcomes of care, which includes being efficient, practicing timely, effective and informed care, utilizing measurement, monitoring outcomes, and focusing on process improvement.
