WHO ARE OCCUPATIONAL THERAPY PRACTITIONERS?

Occupational therapy practitioners are either occupational therapists or occupational therapy assistants. They are skilled health care professionals who use research and scientific evidence to ensure their interventions are effective. With strong knowledge of a person's psychological, physical, emotional, and social makeup, occupational therapy practitioners can evaluate how your condition (or risk for one) is affecting your body and mind, using a holistic perspective.

WHAT IS OCCUPATIONAL THERAPY?

Answering the six Qs—what, why, who, when, where, and how—about occupational therapy.

WHERE CAN I GET OCCUPATIONAL THERAPY?

Occupational therapy practitioners work in a variety of settings—including hospitals, schools, clinics, skilled nursing facilities, community centers, and health care facilities, and they can even come to your home.

HOW DO I SCHEDULE AN OCCUPATIONAL THERAPY VISIT?

Ask your physician about a referral for occupational therapy services or look for a private practice in your community. Talk to your child's teacher about occupational therapy services at school.

Get more information about occupational therapy at www.aota.org.
Imagine if an accident, injury, disease, or condition made it difficult for you to participate in your daily activities. A wrist injury means that getting dressed in the morning is painful. Arthritis makes driving challenging. Autism may hinder a child from interacting effectively with classmates. A traumatic brain injury keeps a wounded warrior out of active duty because of difficulties with memory and organizational skills. Or a small change in your activities or the environment could prevent a future condition (such as using ergonomics at work to avoid injury).

Occupational therapy allows people across the lifespan to do the activities they want and need to do. An occupational therapy practitioner will keep the focus on the things you need and want to do—your goals, your activities, your independence. With occupational therapy services you can:

- Achieve goals, such as helping your teenager with a developmental disability gain the skills to transition from high school to independent living as an adult.
- Stay as healthy and productive as possible, while managing a chronic medical condition.
- Maintain or rebuild your independence, such as using assistive devices so you can care for yourself after a stroke.
- Participate in the everyday activities important to you, such as driving, visiting friends, going to church, and other activities that keep you involved with your community.

In short, an occupational therapy practitioner can help you live life to its fullest no matter your health condition, disability, or risk factors.
